Edgerton Hospital's Wound and Ostomy Care Clinic

Passionate People, Compassionate Care

Welcome to Edgerton Hospital's Wound and Ostomy Care Clinic.

Our skin is the largest organ of our body and helps to protect us from germs and infection. When the integrity of any tissue in our skin is compromised, this is called a wound, and increases our risk of infection. The deeper and larger a wound is, the more care it needs.

Our wound care team, consisting of a medical director and specially trained wound nurses, work together to monitor and treat your wounds. We also have an experienced, specially trained ostomy nurse.

Why choose our Wound and Ostomy Care Clinic?

Most of the time, the body is able to heal wounds through a natural process. For some of us, that healing process is affected by risk factors, and then you are left with a wound that will not heal in a timely manner.

Ostomy patients deserve to receive professional medical support, stoma nursing care and psychosocial support in both the pre and post-operative stage.

We take pride in the fact that we are a small community hospital and can provide individualized, patient-centered care. We have the ability to form a close bond with each patient we serve. Our wound care team heals wounds with evidence-based advanced wound care.

We can also offer flexible appointment times to meet your needs. Our team understands the importance of communication. We make a positive impact on the health and well-being of those we care for.

There is no need to travel when you can receive quality care close to home.

Services Offered

Our certified wound nurses, in collaboration with the medical director and your physician, can offer:

- Evidence based wound care
- Advanced wound care
- Comprehensive evaluation
- Individualized care plan
- Extensive patient-centered education
- Management and prevention of wounds
- Ostomy management
- Wound cultures
- Vascular studies
- ABI measurements
- Conservative Sharps debridement
- Skilled in Wound Vac treatment
- Diabetes recommendations
- Nutrition and therapy consultations

In addition, our staff will work closely with the referring physician to ensure that any underlying factors and health problems contributing to the delay of healing are addressed.

Types of Wounds Treated

Acute Wounds: Chronic Wounds:

Surgical	Venous
Burns	Arterial
Trauma	Diabetic

Risk Factors

If you have any of the following conditions, you may be at risk for developing non-healing wounds:

- Diabetes
- Traumatic injury
- Complications following surgery
- Peripheral vascular disease
- Rheumatoid arthritis
- Congestive heart failure

Wound Patient's Bill of Rights[®]

You Have a Right to:

- Actively participate as a member of your wound care team if you are able and willing.
- Have your wound assessed and monitored by trained healthcare personnel.
- Know what wound treatment options are available to you.
- Know the benefits, risks and side-effects of your wound care treatments.
- Participate in the development of your treatment plan with your wound care team.
- Receive timely and cost effective wound treatment.
- Have your wound treated appropriately with safe and effective products.
- Have your pain adequately controlled.
- Seek other opinions about our wound treatment plan if you so desire and consult a specialist as necessary.
- Consult other healthcare professionals for advice about diet, exercise, therapy or products.
