Passionate People, Compassionate Care

Don't let a wound keep you from enjoying life!

Our skin is the largest organ of our body and helps to protect us from germs and infections.

Wounds are a break in the skin caused by disease, injury, poor circulation, pre diabetes, diabetes, poor nutrition and other conditions.

A wound that does not always heal as it should could put you at risk for infection and more serious complications. Wounds can also cause pain and discomfort which can decrease your activity and quality of life. Wounds that do not heal in a timely matter need more specialized care.

With chronic wounds, the healing process is affected by risk factors as well as a variety of complications that require expertise.

Is it time for advanced treatment?

The Edgerton Hospital Wound, Ostomy, and Diabetic Wound/Foot Care Clinic is designed and equipped to deliver the latest in advanced, modern wound care technology. We have a multidisciplinary team including medical directors, specialized wound nurses, and an ostomy and diabetic wound nurse who take pride in the fact that we are a small community hospital clinic and can provide individualized, patient-centered care. We have the ability to form a close bond with each patient and use evidenced based care.

We offer flexible appointments to meet your needs. Our team understands the importance of communication and makes a positive impact on the health and wellbeing of those we care for.

A general surgeon and podiatrist are available to work with you, so there is no need to travel. You can receive *quality care* close to home.

Ostomy patients: We will provide you with professional support in both the pre and post-operative stage.

Don't wait: It's the choices you make and the things you do every day that will have the biggest impact on your life-now and in the future.
